CTET Paper II Social Studies/Social Science MCQ

- Part 1** : History, Geography and Civics Content — Q001-Q100
- Set 01** — Early Societies, Cities and Historical Sources (Q001-Q010)
- Set 02** — New Ideas, Empires, Culture and Science (Q011-Q020)
- Set 03** — Medieval India, Architecture and Regional Cultures (Q021-Q030)
- Set 04** — Colonialism, Reform and the Nationalist Movement (Q031-Q040)
- Set 05** — Earth, Globe, Latitude and Longitude (Q041-Q050)
- Set 06** — Environment, Air and Water (Q051-Q060)
- Set 07** — Human Environment, Resources and Agriculture (Q061-Q070)
- Set 08** — Diversity, Government and Local Life (Q071-Q080)
- Set 09** — Democracy, Media, Gender and the Constitution (Q081-Q090)
- Set 10** — Judiciary, Social Justice and Rights (Q091-Q100)
- Part 1** Quick Answer Index

CTET Paper II Social Studies/Social Science MCQ

- Part 2** : Social Science Pedagogy — Q101-Q200
- Set 11** — Nature and Concept of Social Science (Q101-Q110)
- Set 12** — Classroom Processes, Activities and Democratic Discourse (Q111-Q120)
- Set 13** — Enquiry, Primary Sources and Empirical Evidence (Q121-Q130)
- Set 14** — History Pedagogy, Timelines and Local History (Q131-Q140)
- Set 15** — Geography Pedagogy, Maps and Spatial Thinking (Q141-Q150)
- Set 16** — Civics Pedagogy and Democratic Participation (Q151-Q160)
- Set 17** — Evaluation and Assessment in Social Science (Q161-Q170)
- Set 18** — Problems of Teaching, Inclusion and Remedial Support (Q171-Q180)
- Set 19** — Projects, Community Resources and Interdisciplinary Work (Q181-Q190)
- Set 20** — Classroom Scenarios and Integrated Revision (Q191-Q200)
- Part 2** Quick Answer Index

CTET Paper II Social Studies/Social Science

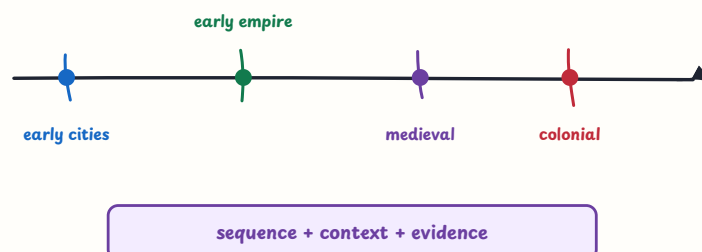

MCQ

Part 1: History, Geography and Civics Content — Q001-Q100

Set 01 — Early Societies, Cities and Historical Sources (Q001-Q010)

History is studied through evidence, chronology, context and interpretation.

timeline: sequence helps connect events and change

चित्र 1 — a timeline helps connect sequence with historical change

Q001. Which combination gives useful evidence for studying the past?

- A. inscriptions, coins, buildings and manuscripts
- B. only modern opinions
- C. only a ruler's portrait
- D. only one undated story

Answer: A

Explanation: Historians compare material, written and other sources rather than relying on one type of evidence.

Q002. The timeline figure is useful mainly because it helps learners—

- A. memorise colours without dates
- B. place events in sequence and discuss change over time
- C. prove that every period was identical
- D. avoid asking how evidence was dated

Answer: B

Explanation: Chronology gives a framework for comparing events, continuities and changes.

Q003. Archaeology is the study of the past mainly through—

- A. future predictions only
- B. personal guesses without objects
- C. material remains and their context
- D. weather reports from the present

Answer: C

Explanation: Archaeologists examine objects, structures, layers and sites in context.

Q004. The earliest cities in the Indian subcontinent discussed in the Class VI–VIII history theme are associated with the—

- A. Mughal Empire
- B. Delhi Sultanate
- C. British Raj only
- D. Harappan or Indus civilisation

Answer: D

Explanation: Harappan cities such as Mohenjo-daro and Harappa are among the earliest urban settlements of the subcontinent.

Q005. A planned drainage system in an ancient city can suggest—

- A. organised urban planning and civic arrangements
- B. that every resident was a king
- C. that agriculture was impossible
- D. that writing did not exist anywhere

Answer: A

Explanation: Drains and streets provide evidence of planning, labour and collective arrangements.

Q006. Ancient seals may have been useful for—

- A. measuring rainfall exactly
- B. marking identity, goods or exchanges
- C. showing the modern national boundary
- D. replacing all spoken languages

Answer: B

Explanation: Seals and their symbols can provide clues about identity, trade and administration, though interpretation must be cautious.

Q007. Agricultural surplus can contribute to the growth of cities because it—

- A. eliminates the need for skilled work
- B. makes all settlements temporary
- C. supports people engaged in crafts, trade or administration
- D. prevents exchange between regions

Answer: C

Explanation: Surplus food can support a wider range of occupations beyond food production.

Q008. In early Indian history, a janapada was broadly a—

- A. type of metal tool
- B. religious building only
- C. unit of measurement for rainfall
- D. territorial polity or settlement of a people

Answer: D

Explanation: Janapadas were territorial communities or political regions; some later developed into mahajanapadas.

Q009. Ashokan inscriptions are particularly useful because they provide evidence about—

- A. the ruler's messages, policies and ideas of governance
- B. the exact thoughts of every ordinary person
- C. modern railway routes
- D. only the climate of Europe

Answer: A

Explanation: Inscriptions record official messages and ideas, although they represent a particular viewpoint.

Q010. Why should historians compare more than one source about an event?

- A. One source always contains every fact
- B. Different sources can confirm, qualify or challenge one another.
- C. Comparison makes dates unnecessary
- D. Sources never have a point of view

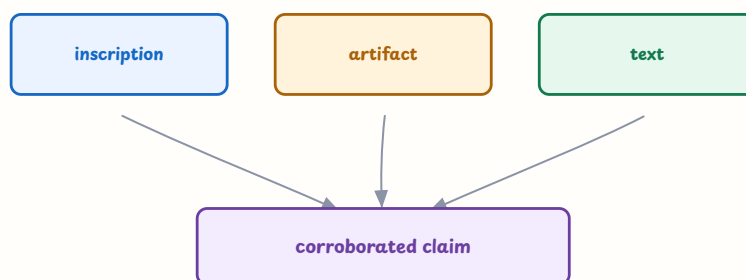

Answer: B

Explanation: Corroboration helps identify agreement, gaps, bias and differences in perspective.

Set 02 — New Ideas, Empires, Culture and Science (Q011-Q020)

Historical claims become stronger when source, date, purpose and context are considered.

historical evidence: compare sources before making a claim

source + context + comparison

चित्र 2 — inscriptions, artefacts and texts can be compared as historical evidence

Q011. Which is an example of a primary historical source?

- A. a modern guidebook about the period
- B. a student's revision note
- C. an inscription produced during the period being studied
- D. a recent fictional film

Answer: C

Explanation: A primary source originates in or near the period under investigation; it still needs contextual interpretation.

Q012. Who is traditionally associated with the beginning of Buddhism?

- A. Ashoka's minister
- B. Akbar
- C. Aryabhata
- D. Gautama Buddha

Answer: D

Explanation: Buddhist traditions identify Siddhartha Gautama, the Buddha, as the teacher whose ideas began the tradition.

Q013. Mahavira is associated with the development of—

- A. Jainism
- B. Mughal administration
- C. the Bhakti movement only
- D. the British Parliament

Answer: A

Explanation: Mahavira is regarded in Jain tradition as the 24th Tirthankara and a major teacher of Jainism.

Q014. After the Kalinga war, Ashoka is remembered for placing greater emphasis on—

- A. continuous conquest as the only policy
- B. dhamma, ethical conduct and welfare
- C. ending all public communication
- D. replacing agriculture with sea trade

Answer: B

Explanation: Ashoka's later inscriptions emphasise moral conduct, non-violence, respect and welfare.

Q015. The Mauryan Empire required administration of a large territory. This helps historians study—

- A. only village games
- B. the absence of trade
- C. taxation, officials, communication and political organisation
- D. a society without occupations

Answer: C

Explanation: Large empires leave evidence of institutions, revenue, officials and routes used to govern.

Q016. Long-distance trade routes in the past encouraged—

- A. complete isolation of communities
- B. the end of all local crafts
- C. only the movement of rainfall
- D. the movement of goods, ideas, people and cultural practices

Answer: D

Explanation: Trade connects regions economically and can also carry technologies, beliefs and artistic forms.

Q017. Aryabhata is remembered in the history of Indian science mainly for work related to—

- A. mathematics and astronomy
- B. modern railway engineering
- C. colonial revenue law
- D. printing newspapers in English

Answer: A

Explanation: Aryabhata's writings contributed to mathematical and astronomical knowledge in early India.

Q018. Institutions such as Nalanda provide evidence of—

- A. a ban on all debate
- B. organised centres of learning and intellectual exchange
- C. only military training
- D. the absence of written knowledge

Answer: B

Explanation: Such centres attracted learners and teachers and supported study across fields.

Q019. Coins can help historians investigate—

- A. the exact voice of every citizen
- B. only household recipes
- C. economy, political authority and patterns of exchange
- D. future monsoon dates

Answer: C

Explanation: Coins carry information about rulers, symbols, metals, production and circulation.

Q020. Which is the correct broad chronological order?

- A. Mauryan Empire → Harappan civilisation → Gupta period → Mughal Empire
- B. Gupta period → Harappan civilisation → Mauryan Empire → Mughal Empire
- C. Mughal Empire → Mauryan Empire → Harappan civilisation → Gupta period
- D. Harappan civilisation → Mauryan Empire → Gupta period → Mughal Empire

Answer: D

Explanation: Chronology places the Harappan urban phase before the Mauryan and Gupta periods, with the Mughal period much later.

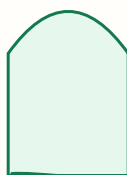

Set 03 — Medieval India, Architecture and Regional Cultures (Q021-Q030)

Medieval history includes political systems, cultural exchange, architecture, languages and regional traditions.

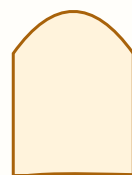

architecture: structure, material and purpose give historical clues

arch

vault

dome

read buildings as evidence, not decoration only

चित्र 3 — arches, vaults and domes provide clues about architectural techniques

Q021. The architecture figure can help learners ask how buildings reflect—

- A. materials, techniques, purposes and historical contexts
- B. only the colour of the walls
- C. the future population exactly
- D. a single ruler's personality in every case

Answer: A

Explanation: Buildings are evidence of technology, labour, patronage, use and cultural interaction.

Q022. In the Delhi Sultanate, an iqta was broadly connected with—

- A. a type of temple sculpture
- B. assignment of revenue from a territory to an official
- C. a village seed variety
- D. a unit for measuring latitude

Answer: B

Explanation: The iqta system linked territorial revenue assignments with administrative and military responsibilities.

Q023. The Mughal mansabdari system was mainly a system of—

- A. irrigation by village wells
- B. classifying rocks
- C. ranking and service in the imperial administration
- D. teaching only religious poetry

Answer: C

Explanation: Mansabs indicated rank and responsibilities within the Mughal administrative and military structure.

Q024. Akbar's idea of sulh-i-kul is commonly associated with—

- A. a rule that banned all cultures
- B. only the expansion of cavalry
- C. a method of measuring crops
- D. peace and tolerance among different communities

Answer: D

Explanation: Sulh-i-kul expressed a policy of universal peace and inclusive governance in the Mughal context.

Q025. Many Bhakti poets used local languages mainly to—

- A. communicate devotional ideas to wider communities
- B. make poetry inaccessible to ordinary people
- C. record only military taxes
- D. replace every regional tradition

Answer: A

Explanation: Use of local languages widened participation and produced diverse devotional traditions.

Q026. A Sufi khanqah was generally a place associated with—

- A. only the storage of weapons
- B. spiritual teaching, community and hospitality
- C. a land-measurement office
- D. the manufacture of coins only

Answer: B

Explanation: Khanqahs were centres where Sufi teachers and followers met and often offered food or shelter.

Q027. Travel accounts are useful historical sources, but historians should remember that they—

- A. are always complete and unbiased
- B. contain no observation at all
- C. reflect the traveller's purpose, experience and viewpoint
- D. can replace every local source

Answer: C

Explanation: Travellers may notice valuable details but also misunderstand or generalise from limited experience.

Q028. Regional cultures develop through interaction among—

- A. only one national occupation
- B. weather records alone
- C. a single unchanging textbook
- D. languages, communities, political settings, beliefs and artistic practices

Answer: D

Explanation: Regional cultures are shaped by many social, political and environmental processes.

Q029. The growth of medieval towns was often connected with—

- A. trade, crafts, administration and transport routes
- B. the complete end of agriculture
- C. a ban on markets
- D. only forest hunting

Answer: A

Explanation: Urban centres grew where production, exchange, political power and movement supported one another.

Q030. When studying an old building, the most careful conclusion is to—

- A. assume its entire history from its shape alone
- B. combine its physical evidence with inscriptions, records and context
- C. ignore who used it
- D. date it only by its modern paint

Answer: B

Explanation: Historical interpretation is stronger when different evidence and the building's context are considered together.

Set 04 — Colonialism, Reform and the Nationalist Movement (Q031-Q040)

Colonial history is studied through policies, changing livelihoods, resistance, reform and multiple nationalist voices.

national movement: ideas, people and actions changed over time

many groups, many methods, shared goal

avoid reducing a movement to one event or one person

चित्र 4 — a movement develops through people, ideas, actions, negotiation and change

Q031. The East India Company's victory at Plassey in 1757 is important because it—

- A. ended all Company trade immediately
- B. created independent India
- C. helped the Company gain political influence in Bengal
- D. abolished every local ruler at once

Answer: C

Explanation: The victory strengthened Company influence and became part of its expansion of political power in Bengal.

Q032. Under the Permanent Settlement, revenue collection in Bengal was closely associated with

—

- A. only factory workers
- B. village schoolchildren
- C. forest animals
- D. zamindars who were expected to collect revenue

Answer: D

Explanation: The arrangement recognised zamindars as revenue collectors and fixed demands, with serious effects on cultivators.

Q033. Colonial policies affected peasants and artisans by—

- A. changing revenue demands, markets, crops and conditions of production
- B. leaving all livelihoods completely unchanged
- C. ending every form of trade
- D. giving every artisan equal protection

Answer: A

Explanation: Colonial rule altered land revenue, commercialisation, imports, markets and access to resources.

Q034. The Revolt of 1857–58 is best understood as—

- A. a protest caused by one issue only
- B. a major uprising with several regional, political, military and social causes
- C. an event limited to one village
- D. a movement that had no local leadership

Answer: B

Explanation: The revolt involved different groups and causes that varied across regions.

Q035. Many tribal resistances during colonial rule were responses to—

- A. the spread of satellite communication
- B. a shortage of printed newspapers only
- C. loss of land, forest restrictions, taxes and outside control
- D. the end of all local farming before colonialism

Answer: C

Explanation: Colonial forest and land policies and the entry of outsiders disrupted many tribal communities.

Q036. Nineteenth-century social reform debates often focused on—

- A. only the design of railway engines
- B. ending all discussion of society
- C. replacing agriculture with mining everywhere
- D. education, women's rights, caste practices and social customs

Answer: D

Explanation: Reformers and critics debated practices, education, rights and the nature of social change.

Q037. Jyotirao Phule is especially associated with criticism of—

- A. caste inequality and the denial of education
- B. the use of maps in geography
- C. the Mughal mansabdari system only
- D. the working of ocean currents

Answer: A

Explanation: Phule challenged caste hierarchy and supported education for oppressed groups and women.

Q038. Nationalist newspapers, symbols and public meetings helped to—

- A. prevent people from communicating
- B. spread political ideas and build collective identities
- C. end all regional languages
- D. replace every political organisation

Answer: B

Explanation: Communication and symbols helped people discuss colonial rule, rights and common political goals.

Q039. The Non-Cooperation Movement is associated with—

- A. supporting every colonial institution
- B. a campaign to expand Company rule
- C. boycott, non-violent resistance and withdrawal of cooperation
- D. ending all public participation

Answer: C

Explanation: Non-Cooperation encouraged people to withdraw support from selected colonial institutions through non-violent action.

Q040. India's independence should be understood as the result of—

- A. one isolated speech alone
- B. only a change in a map
- C. an event with no public involvement
- D. long-term movements, diverse participation, negotiations and changing conditions

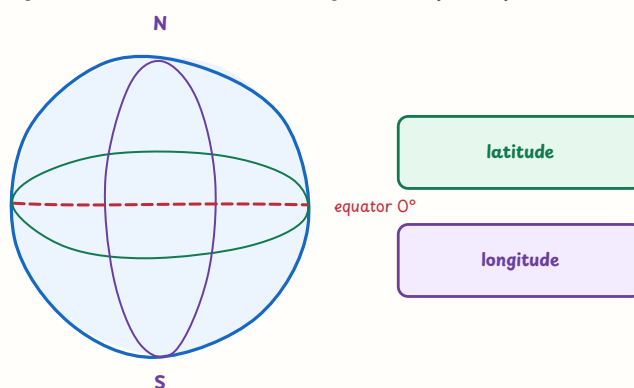

Answer: D

Explanation: Independence emerged through many movements, sacrifices, political developments and negotiations.

Set 05 — Earth, Globe, Latitude and Longitude (Q041-Q050)

Maps and globes help learners develop spatial thinking, direction, scale and location.

globe: latitude runs east-west; longitude runs pole to pole

चित्र 5 — equator, latitude and longitude organise location on a globe

Q041. On the globe figure, lines of latitude generally run—

- A. east-west and remain parallel to the Equator
- B. from pole to pole only
- C. in random directions
- D. only through oceans

Answer: A

Explanation: Parallels of latitude circle the Earth east-west; the Equator is the largest one.

Q042. Rotation of the Earth mainly causes—

- A. the formation of all rocks
- B. day and night
- C. the phases of the Moon
- D. the direction of every river

Answer: B

Explanation: Earth's rotation on its axis causes different parts to face the Sun and then turn away.

Q043. The yearly cycle of seasons is mainly related to Earth's—

- A. rotation alone without tilt
- B. distance from the Moon only
- C. revolution around the Sun along with its tilted axis
- D. shape of every mountain

Answer: C

Explanation: Earth's revolution and axial tilt change the angle and duration of sunlight received.

Q044. The Equator is at—

- A. 90° north longitude
- B. 0° longitude only
- C. 180° latitude
- D. 0° latitude

Answer: D

Explanation: The Equator is the reference line for latitude and is assigned 0° latitude.

Q045. The Prime Meridian is at—

- A. 0° longitude
- B. 0° latitude
- C. 90° latitude
- D. 180° latitude

Answer: A

Explanation: The Prime Meridian is the reference line from which east and west longitudes are measured.

Q046. Lines of latitude are called parallels because they—

- A. all meet at both poles
- B. do not meet one another
- C. are all vertical
- D. show only political boundaries

Answer: B

Explanation: Latitude lines are parallel circles of different sizes, with the Equator as the largest.

Q047. Lines of longitude meet at the—

- A. Equator only
- B. centre of every continent
- C. North and South Poles
- D. same point in every city

Answer: C

Explanation: Meridians run from pole to pole and converge at the poles.

Q048. A globe is especially useful because it—

- A. shows every street in full detail
- B. has no scale or direction
- C. can display only political data
- D. models the Earth's three-dimensional shape

Answer: D

Explanation: A globe represents Earth's curved surface more directly than a flat map.

Q049. The scale of a map tells us—

- A. the relationship between map distance and ground distance
- B. the age of the map paper
- C. the number of colours used
- D. the height of every mountain

Answer: A

Explanation: Scale allows distances on a map to be related to actual distances on the ground.

Q050. A map legend or key is used to—

- A. show only the map's price
- B. explain the meaning of symbols and colours
- C. replace the direction indicator
- D. hide all physical features

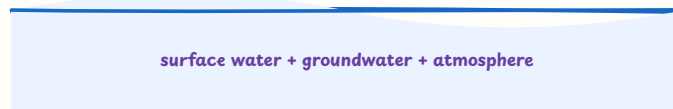

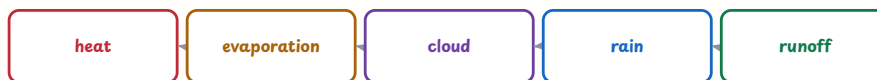

Answer: B

Explanation: A legend helps the reader interpret the signs used on a map.

Set 06 — Environment, Air and Water (Q051-Q060)

Natural processes and human activities interact in the environment.

air and water: natural processes connect atmosphere and surface

चित्र 6 — heat, air and water processes connect the atmosphere with the surface

Q051. The environment includes—

- A. only forests and rivers
- B. only buildings and roads
- C. natural surroundings and human-made or social surroundings
- D. only the air above a city

Answer: C

Explanation: Environment is understood in totality, including physical, biological and human components.

Q052. The atmosphere is—

- A. the solid layer beneath soil only
- B. all the water in oceans
- C. a type of mineral
- D. the envelope of gases surrounding Earth

Answer: D

Explanation: The atmosphere is the gaseous layer around Earth and supports weather and life processes.

Q053. Air generally moves from a region of—

- A. higher air pressure to lower air pressure
- B. lower pressure to higher pressure only
- C. equal pressure with no difference
- D. solid rock to the sky

Answer: A

Explanation: Differences in air pressure drive the movement of air experienced as wind.

Q054. Wind is best described as—

- A. stationary water vapour
- B. moving air
- C. soil moving inside rocks
- D. light travelling through glass

Answer: B

Explanation: Wind is air in motion, often caused by uneven heating and pressure differences.

Q055. In the water cycle, evaporation changes—

- A. water vapour into ice only
- B. solid rock into water
- C. liquid water into water vapour
- D. clouds directly into soil

Answer: C

Explanation: Heating gives water molecules energy to move from the liquid surface into the air as vapour.

Q056. Rain, snow and hail are forms of—

- A. condensation only
- B. evaporation
- C. air pressure
- D. precipitation

Answer: D

Explanation: Precipitation is water that falls from clouds to Earth in liquid or solid forms.

Q057. Water scarcity in a region can be increased by—

- A. overuse, pollution, unequal access and irregular rainfall
- B. careful conservation alone
- C. repairing every leak
- D. recharging groundwater responsibly

Answer: A

Explanation: Scarcity is shaped by physical availability as well as human use, pollution and access.

Q058. Freshwater is limited because—

- A. all ocean water is immediately drinkable
- B. most of Earth's water is salty or stored in forms not readily available for use
- C. rivers never receive rainfall
- D. water cannot change state

Answer: B

Explanation: Only a small share of Earth's water is accessible freshwater; treatment and conservation are important.

Q059. Which action supports water conservation?

- A. leaving taps running
- B. pumping groundwater without limit
- C. reusing suitable water and preventing leaks
- D. washing paved roads with drinking water daily

Answer: C

Explanation: Reducing waste and reusing water where safe helps preserve the resource.

Q060. Sustainable environmental use means—

- A. using resources as quickly as possible
- B. ignoring effects on other communities
- C. stopping every human activity
- D. meeting present needs while protecting resources and future possibilities

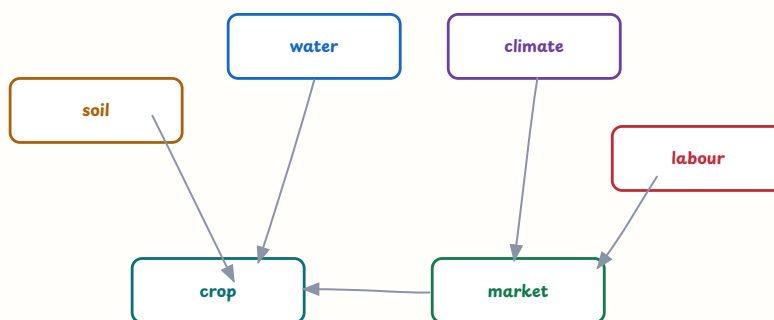

Answer: D

Explanation: Sustainability balances present use with ecological limits, fairness and future needs.

Set 07 — Human Environment, Resources and Agriculture (Q061-Q070)

Settlement, transport, resources and agriculture show how physical and human factors interact.

agriculture depends on soil, water, climate, labour and markets

human and physical factors interact

चित्र 7 — soil, water, climate, labour and markets interact in agriculture

Q061. A settlement is often located near a reliable water source because water is needed for—

- A. drinking, domestic use, farming and many activities
- B. only measuring longitude
- C. preventing all transport
- D. making every landform flat

Answer: A

Explanation: Water availability supports life, household needs, production and settlement decisions.

Q062. Transport mainly helps people and goods to—

- A. change the Earth's rotation
- B. move between places
- C. produce rainfall directly
- D. remove the need for communication

Answer: B

Explanation: Roads, railways, waterways and airways connect locations and support movement.

Q063. Communication refers to—

- A. only carrying crops by road
- B. measuring the depth of soil
- C. sharing information across distance
- D. changing one type of rock into another

Answer: C

Explanation: Phones, letters, radio, internet and other systems transmit information.

Q064. Which is a renewable natural resource when managed responsibly?

- A. coal
- B. petroleum
- C. natural gas
- D. solar energy

Answer: D

Explanation: Sunlight is naturally replenished, whereas fossil fuels form over geological time.

Q065. Human resources include people's—

- A. knowledge, skills, health and ability to work
- B. only the minerals under the ground
- C. only rivers and forests
- D. only machines imported from abroad

Answer: A

Explanation: Human resources refer to the capabilities and contributions of people.

Q066. Agriculture depends on the interaction of—

- A. only the colour of seeds
- B. soil, water, climate, labour, technology and markets
- C. only the distance from the Equator
- D. no environmental factor

Answer: B

Explanation: Farming decisions and outcomes are shaped by physical, technological and social-economic factors.

Q067. Subsistence agriculture is mainly undertaken to—

- A. produce only for distant export
- B. avoid using any land
- C. meet the food needs of the farmer's household or local community
- D. replace all food with minerals

Answer: C

Explanation: Subsistence farming is oriented primarily towards consumption, though some surplus may be sold.

Q068. Irrigation is—

- A. the removal of all soil from a field
- B. a method of measuring wind
- C. the natural movement of planets
- D. the artificial supply of water to crops

Answer: D

Explanation: Irrigation supplements rainfall through canals, wells, sprinklers or other systems.

Q069. Terrace farming is especially suitable on—

- A. sloping or hilly land
- B. flat ocean water
- C. only desert sand dunes without preparation
- D. the roof of a building

Answer: A

Explanation: Terraces create step-like fields, slow runoff and make cultivation possible on slopes.

Q070. Sustainable use of resources requires—

- A. unlimited extraction
- B. conservation, efficient use and attention to ecological and social effects
- C. using one resource for every purpose
- D. ignoring local knowledge and future needs

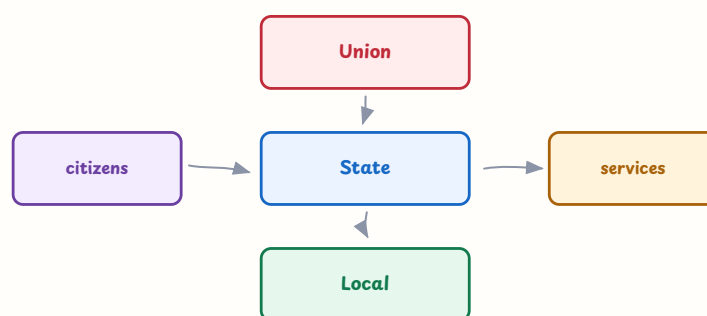

Answer: B

Explanation: Sustainable use considers limits, waste, equity, environmental effects and future generations.

Set 08 — Diversity, Government and Local Life (Q071-Q080)

Civics examines how people live together, make decisions, share power and seek justice.

government works through connected levels and institutions

चित्र 8 — citizens, government levels and public services are connected

Q071. Diversity in a society can be a strength when—

- A. one group is treated as naturally superior
- B. differences are hidden by force
- C. differences are respected and people participate with equal dignity
- D. only one language is allowed in every situation

Answer: C

Explanation: Democracy and social justice value diversity while opposing discrimination and unequal dignity.

Q072. Prejudice means—

- A. a constitutional remedy
- B. a local government meeting
- C. a scientific measurement
- D. forming a judgement about a person or group without adequate knowledge or evidence

Answer: D

Explanation: Prejudice is an often negative pre-judgement that can produce discrimination.

Q073. One important function of government is to—

- A. make public decisions, provide services and enforce laws
- B. serve only one private family
- C. avoid collecting any information
- D. remove all participation by citizens

Answer: A

Explanation: Government institutions make and implement decisions for public life and are accountable to people.

Q074. Local government is important because it—

- A. controls the entire world economy
- B. addresses local needs and allows participation closer to people's lives
- C. replaces every court
- D. has no relation to public services

Answer: B

Explanation: Local bodies handle many nearby concerns and create opportunities for democratic participation.

Q075. The Gram Sabha consists broadly of—

- A. only government officers from the capital
- B. only elected members of Parliament
- C. adult voters of a village who can discuss local matters
- D. only private company owners

Answer: C

Explanation: The Gram Sabha provides a forum for village voters to participate in local governance.

Q076. A municipality generally governs—

- A. only a forest reserve
- B. the entire country
- C. a single household
- D. an urban area

Answer: D

Explanation: Municipal bodies manage urban local services and civic concerns.

Q077. Livelihood refers to—

- A. the ways people earn a living and meet their needs
- B. only a person's leisure activity
- C. the shape of a continent
- D. a court's final judgement

Answer: A

Explanation: Livelihoods include occupations, resources, skills and activities through which people support life.

Q078. The idea of dignity of labour means—

- A. only highly paid jobs matter
- B. all forms of honest work deserve respect
- C. manual work has no value
- D. care work should remain invisible

Answer: B

Explanation: Dignity of labour challenges hierarchies that disrespect necessary work or workers.

Q079. Taxes help governments provide public goods such as—

- A. only private gifts
- B. personal marks in an exam
- C. roads, schools, health services and sanitation
- D. weather changes

Answer: C

Explanation: Public revenue supports services and infrastructure used by communities.

Q080. Democracy is strengthened when citizens—

- A. remain permanently silent
- B. accept every decision without evidence
- C. allow only one person to vote
- D. participate, question decisions and hold institutions accountable

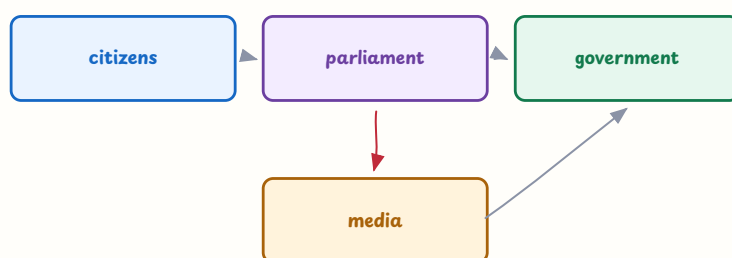

Answer: D

Explanation: Participation and accountability are central to democratic public life.

Set 09 — Democracy, Media, Gender and the Constitution (Q081-Q090)

Democratic institutions depend on representation, information, equality and public accountability.

democracy: representation, debate and public information

information enables questioning and accountability

चित्र 9 — representation, debate and information support democratic accountability

Q081. A basic democratic principle is that—

- A. eligible citizens have equal political value and voting rights
- B. only wealthy people should vote
- C. one family should have all votes
- D. citizens should never question government

Answer: A

Explanation: Political equality means citizens' votes and civic status should not depend on wealth or social identity.

Q082. The elected law-making body at the state level is the—

- A. Supreme Court only
- B. State Legislative Assembly
- C. Gram Sabha of every country
- D. Union Public Service Commission

Answer: B

Explanation: The Legislative Assembly is the elected legislature of a state; it debates and makes state laws within its powers.

Q083. The opposition in a legislature is important because it can—

- A. end all elections
- B. control every court
- C. question the government and present alternative views
- D. prevent citizens from receiving information

Answer: C

Explanation: Opposition improves scrutiny, debate and accountability in representative government.

Q084. One democratic role of media is to—

- A. hide every public decision
- B. replace the Constitution
- C. make laws without elected bodies
- D. inform people and examine the actions of public institutions

Answer: D

Explanation: Media can support informed citizenship by reporting, questioning and providing different viewpoints.

Q085. Why should readers examine media ownership and sources?

- A. Ownership, selection and presentation can influence which perspectives receive attention.
- B. Every report is automatically neutral
- C. sources never use evidence
- D. media has no effect on public discussion

Answer: A

Explanation: Media literacy asks who produced information, for what purpose and with what evidence or omissions.

Q086. Gender is understood in civics as—

- A. a fixed ability of every individual
- B. roles and expectations shaped partly by society and culture
- C. a synonym for biological age
- D. a reason to deny equal opportunity

Answer: B

Explanation: Gender roles are socially shaped and can create unequal expectations and opportunities.

Q087. Unpaid care work should be recognised because it—

- A. has no economic or social value
- B. is always done only by women
- C. supports households and society even when it is not paid
- D. cannot involve skill or time

Answer: C

Explanation: Cooking, cleaning, care and support are productive contributions and should not be invisibilised.

Q088. The Constitution is important because it—

- A. is only a list of weather observations
- B. applies only to one private organisation
- C. removes all limits on government power
- D. sets principles, rights and structures for governing a diverse country

Answer: D

Explanation: A constitution establishes institutions, values, rights and limits that guide public authority.

Q089. The constitutional principle of equality opposes—

- A. discrimination and unequal treatment based on identity
- B. equal dignity
- C. equal protection of law
- D. access to public institutions

Answer: A

Explanation: Equality requires equal status and protection while recognising the need to remove barriers.

Q090. Parliamentary government is accountable when—

- A. ministers never face questions
- B. the executive answers to the elected legislature and the public
- C. laws are made secretly by one person
- D. citizens cannot discuss public policy

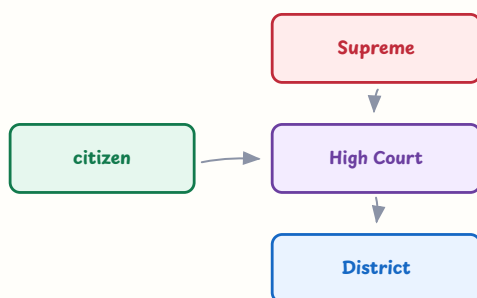

Answer: B

Explanation: Questioning, debate, committees and elections create channels of accountability.

Set 10 — Judiciary, Social Justice and Rights (Q091–Q100)

Justice involves rights, remedies, rule of law, independent institutions and attention to marginalised groups.

judicial structure: disputes can move through levels of courts

independence + rule of law + remedy

चित्र 10 — courts at different levels provide a route for hearing disputes and remedies

Q091. An independent judiciary is important because courts should—

- A. follow every executive order without examination
- B. make election promises
- C. decide cases according to law without improper pressure
- D. collect crops for villages

Answer: C

Explanation: Judicial independence supports fair interpretation of law and protection of rights.

Q092. The broad court structure in India includes—

- A. only village councils
- B. only Parliament committees
- C. courts with no relationship between levels
- D. District Courts, High Courts and the Supreme Court

Answer: D

Explanation: Cases may begin at lower courts and move through appeals within the judicial structure.

Q093. Public Interest Litigation is intended to—

- A. raise issues affecting public interest, especially when affected people face barriers to access
- B. settle only a private shopping dispute
- C. replace every election
- D. decide the price of crops

Answer: A

Explanation: PIL can help bring matters of wider public concern before courts, subject to legal rules.

Q094. Marginalised groups are groups that—

- A. always control all institutions
- B. face systematic disadvantage or exclusion from resources and opportunities
- C. have no diversity within them
- D. are defined only by geographical height

Answer: B

Explanation: Marginalisation is shaped by social, economic, cultural or political processes of exclusion.

Q095. Affirmative measures may be needed to—

- A. create permanent inequality as a goal
- B. remove all merit from public life
- C. address historical disadvantage and improve substantive equality
- D. deny access to education

Answer: C

Explanation: Treating everyone identically may not remove historic barriers; equity can require targeted support.

Q096. Rule of law means that—

- A. powerful people are above law
- B. laws apply only during elections
- C. courts can ignore all evidence
- D. public authorities and citizens are governed by known laws and legal procedures

Answer: D

Explanation: Rule of law limits arbitrary power and requires fair, predictable legal processes.

Q097. A right becomes meaningful when people can—

- A. seek a remedy or institutional protection when it is violated
- B. only memorise its name
- C. never question an authority
- D. use it only in a private club

Answer: A

Explanation: Rights require mechanisms such as courts, commissions and public procedures for protection and remedy.

Q098. Government welfare programmes should be assessed by asking—

- A. only how attractive the poster is
- B. whether resources reach intended people fairly and outcomes match the purpose
- C. whether no data were collected
- D. whether all criticism is banned

Answer: B

Explanation: Accountability involves transparency, evidence, access, outcomes and opportunities to raise grievances.

Q099. For a problem with a local sanitation service, a citizen may first—

- A. change the national Constitution alone
- B. appeal directly to a foreign court
- C. approach the relevant local body through its complaint or public meeting process
- D. ignore the issue because it is public

Answer: C

Explanation: Local institutions and grievance channels are appropriate starting points for many civic services.

Q100. When a civics source presents only one viewpoint, a careful learner should—

- A. accept it as the complete truth
- B. discard all sources forever
- C. judge it only by its font
- D. ask whose voice is present, whose is missing and compare other evidence

Answer: D

Explanation: Civic and historical understanding improves when perspective, evidence and omissions are examined.

Part 1 Quick Answer Index

001 A	002 B	003 C	004 D	005 A	006 B	007 C	008 D	009 A	010 B
011 C	012 D	013 A	014 B	015 C	016 D	017 A	018 B	019 C	020 D

Revision target: Read timelines and sources in History, scale and symbols in Geography, and institutions, rights and perspectives in Civics. Prefer evidence-based interpretations over unsupported assumptions.

CTET Paper II Social Studies/Social Science MCQ

Part 2: Social Science Pedagogy — Q101-Q200

Set 11 — Nature and Concept of Social Science (Q101–Q110)

Social Science pedagogy develops evidence-based understanding of society, time, space, institutions and multiple perspectives.

Q101. Social Science is best taught as—

- A. an enquiry into people, societies, institutions, environments and change using evidence and interpretation
- B. a list of dates and names to memorise
- C. only political speeches
- D. a subject with no connection to present life

Answer: A

Explanation: Social Science combines concepts and methods from history, geography, civics and related fields to understand social life.

Q102. Social Studies differs from a list of separate subjects because it—

- A. removes all subject concepts
- B. connects knowledge about society with lived experience, citizenship and social issues
- C. uses only one textbook chapter
- D. avoids discussion of communities

Answer: B

Explanation: Social Studies is an integrated school area that connects disciplines and social participation.

Q103. A key aim of Social Science education is to help learners—

- A. accept every claim from authority
- B. remember chronology without meaning
- C. interpret evidence, question assumptions and participate as informed citizens
- D. avoid public issues

Answer: C

Explanation: The subject supports critical understanding, democratic participation and responsible judgement.

Q104. Historical knowledge should be presented to learners as—

- A. a single story with no viewpoint
- B. pure imagination without sources
- C. facts that never need context
- D. evidence-based interpretation that can be refined when new sources or perspectives are considered

Answer: D

Explanation: Sources and interpretations must be examined in context; new evidence can qualify a claim.

Q105. Why should Geography be connected with local surroundings?

- A. Local observation makes spatial, environmental and human relationships meaningful and testable.
- B. Local places have no geographical value
- C. Maps are unnecessary in local study
- D. Every locality has identical conditions

Answer: A

Explanation: Local landscapes, resources and settlements offer authentic contexts for geographic reasoning.

Q106. Multiple perspectives in Social Science are important because—

- A. all viewpoints are automatically equally supported
- B. different groups may experience and explain the same event or policy differently
- C. evidence becomes unnecessary
- D. one viewpoint must always be hidden

Answer: B

Explanation: Perspective matters, but learners should still compare evidence and reason about claims.

Q107. Objectivity in Social Science learning is best approached by—

- A. pretending interpretation never exists
- B. allowing personal bias to decide facts
- C. making evidence, source position, assumptions and reasoning explicit
- D. avoiding controversial evidence

Answer: C

Explanation: Transparency about sources and reasoning is more responsible than claiming a view from nowhere.

Q108. A teacher connects a historical reform with a present discussion of equality mainly to—

- A. judge all past people by one present standard
- B. replace history with current opinion
- C. avoid studying historical context
- D. help learners relate past change to continuing questions without treating the past as identical to the present

Answer: D

Explanation: Present connections can deepen meaning when historical differences and context are preserved.

Q109. Which activity best develops historical and civic thinking together?

- A. Compare two accounts of a public event, identify evidence and discuss how a citizen might respond.
- B. Copy a date repeatedly
- C. memorise one conclusion without sources
- D. colour a map without interpreting it

Answer: A

Explanation: The activity combines source analysis, perspective, evidence and citizenship.

Q110. Which practice does NOT support Social Science learning?

- A. examining a map and its legend
- B. Requiring learners to memorise the teacher's interpretation without asking for evidence or alternatives.
- C. comparing primary and secondary sources
- D. discussing reasons for a policy

Answer: B

Explanation: Meaningful Social Science requires inquiry, evidence and interpretation rather than unexamined recall.

Set 12 — Classroom Processes, Activities and Democratic Discourse (Q111-Q120)

Discussion and activity become pedagogically useful when the teacher provides a purpose, evidence, roles and respectful norms.

democratic discussion: listen, reason, respond and revise

respectful disagreement is learning

roles and norms make participation more equitable

चित्र 1 — democratic classroom discussion links listening, evidence, reasoning, response and revision

Q111. A democratic Social Science classroom gives learners opportunities to—

- A. repeat only the teacher's words
- B. vote without hearing any reasons
- C. ask questions, present reasons, listen to others and participate in shared decisions
- D. avoid disagreement completely

Answer: C

Explanation: Democratic classroom practice combines voice, evidence, respect, participation and reflection.

Q112. Before a discussion on a controversial social issue, the teacher should—

- A. announce the teacher's opinion as the only correct view
- B. allow personal attacks
- C. avoid explaining the issue
- D. set respectful norms, clarify the question and provide relevant evidence or background

Answer: D

Explanation: Structure and evidence make difficult discussion safe and intellectually productive.

Q113. Group work in Social Science is most effective when—

- A. learners have a shared question, clear roles, individual accountability and a product to discuss
- B. one learner does all the work
- C. groups copy the same paragraph
- D. roles are based permanently on marks

Answer: A

Explanation: Purposeful collaboration supports both subject learning and equitable participation.

Q114. A teacher uses a mock Gram Sabha in class mainly to help learners—

- A. memorise the name of a local body only
- B. experience local democratic discussion, agenda setting, participation and decision-making
- C. avoid listening to different views
- D. replace all factual learning with acting

Answer: B

Explanation: Role play can connect institutional concepts with participation when followed by reflection.

Q115. Which teacher question best promotes classroom discourse about a map?

- A. What colour is the largest area?
- B. Can you copy the title?
- C. What pattern do you notice, what evidence shows it and what might explain the pattern?
- D. Who finished the map first?

Answer: C

Explanation: The question moves from observation to evidence and geographic explanation.

Q116. A teacher should use learners' prior experiences in Social Science because—

- A. every experience is automatically a fact
- B. new learning is unnecessary
- C. only one family experience matters
- D. they provide starting points that can be examined, extended or corrected through evidence

Answer: D

Explanation: Prior knowledge supports meaning-making but should remain open to critical examination.

Q117. When a learner makes a stereotyped comment about a community, the teacher should—

- A. challenge the generalisation respectfully, use diverse evidence and invite more nuanced reasoning
- B. humiliate the learner publicly
- C. ignore the comment as harmless
- D. make the stereotype a class rule

Answer: A

Explanation: Teachers should protect dignity while helping learners examine assumptions and evidence.

Q118. Rotating roles such as reader, map analyst, recorder and presenter helps because it—

- A. makes the fastest learner permanent leader
- B. distributes access to different Social Science practices
- C. reduces all work to copying
- D. prevents learners from learning new skills

Answer: B

Explanation: Role rotation makes participation and skill development more equitable.

Q119. A classroom debate should be assessed mainly through—

- A. volume of voice alone
- B. agreement with the teacher
- C. quality of reasoning, use of evidence, listening and respectful response
- D. speed of speaking

Answer: C

Explanation: Democratic discourse values evidence and interaction, not dominance or conformity.

Q120. The discussion figure suggests that disagreement can support learning when learners—

- A. interrupt until one person gives up
- B. treat every opinion as proven
- C. avoid responding to evidence
- D. listen, refer to evidence, explain reasons and remain willing to revise a claim

Answer: D

Explanation: Reasoned disagreement helps learners test and refine explanations.

Set 13 — Enquiry, Primary Sources and Empirical Evidence (Q121-Q130)

Enquiry makes sources, questions, comparison and argument central to Social Science learning.

social-science inquiry: question, source, interpretation and argument

← new evidence may revise the argument

claims need evidence and context

चित्र 2 — a Social Science claim develops through a question, sources, comparison, interpretation and argument

Q121. A primary source is generally—

- A. evidence produced during or close to the period or event being studied
- B. a modern summary written long afterwards
- C. a learner's revision guide
- D. a fictional story with no historical context

Answer: A

Explanation: Primary sources include contemporary inscriptions, letters, records, objects, photographs or oral accounts, each with limitations.

Q122. A secondary source is—

- A. an object made during the event only
- B. a later interpretation or account that analyses primary or other evidence
- C. a source that can never contain an argument
- D. a map drawn by a traveller in the period

Answer: B

Explanation: Textbooks and later histories are secondary sources even when they use valuable evidence.

Q123. Why should learners corroborate historical sources?

- A. One source always includes every fact
- B. Sources never have purpose or bias
- C. Comparison can reveal agreement, gaps, contradictions and different viewpoints.
- D. Corroboration makes context unnecessary

Answer: C

Explanation: Corroboration strengthens interpretation by testing a claim against more than one piece of evidence.

Q124. Which question helps learners identify source bias?

- A. How attractive is its font?
- B. Can every sentence be memorised?
- C. Does the source have the longest title?
- D. Who produced this source, for what purpose, for whom and whose voice may be missing?

Answer: D

Explanation: Authorship, purpose, audience, selection and omission shape a source's perspective.

Q125. An empirical question in Geography should be—

- A. answerable through observations, measurements, records or other systematically collected evidence
- B. based only on a personal preference
- C. impossible to check
- D. decided by the loudest speaker

Answer: A

Explanation: Empirical enquiry connects a question with evidence that can be collected and examined.

Q126. A learner makes an argument about why a town grew near a river. The teacher should ask for—

- A. only the town's colour on a map
- B. relevant evidence about water, transport, land, resources and the limits of the explanation
- C. a memorised paragraph unrelated to the town
- D. an answer without reasons

Answer: B

Explanation: Good geographic arguments connect claims with physical and human evidence.

Q127. A map-based enquiry is strongest when learners—

- A. colour regions without a question
- B. copy a map from memory
- C. use scale, direction, symbols and spatial patterns to answer a stated question
- D. ignore the legend and scale

Answer: C

Explanation: Map skills become meaningful when they are used to investigate and communicate a spatial relationship.

Q128. A teacher asks learners to predict which area will flood and then compare the prediction with rainfall and relief data. This develops—

- A. only map decoration
- B. unquestioned guessing
- C. memorisation of place names
- D. evidence-based reasoning and revision of an explanation

Answer: D

Explanation: Prediction followed by data comparison makes reasoning visible and revisable.

Q129. The best conclusion after an enquiry should—

- A. answer the question with evidence and acknowledge uncertainty or limitations
- B. repeat the first prediction regardless of data
- C. include only an opinion
- D. hide observations that do not fit

Answer: A

Explanation: Responsible enquiry communicates what the evidence supports and what it cannot establish.

Q130. The enquiry-cycle figure is best used to teach that—

- A. one textbook statement is enough
- B. a Social Science claim develops through questions, sources, comparison, interpretation and argument
- C. evidence is needed only in science
- D. interpretation means guessing freely

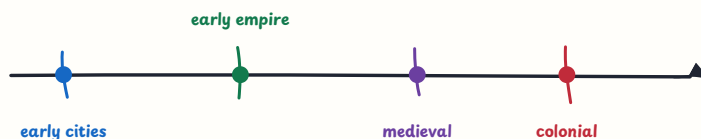

Answer: B

Explanation: The cycle links evidence and reasoning and allows arguments to be refined.

Set 14 — History Pedagogy, Timelines and Local History (Q131-Q140)

History teaching should make chronology, continuity, change, cause, consequence, source and perspective visible.

timeline: sequence helps connect events and change

sequence + context + evidence

चित्र 3 — chronology supports comparison of sequence, continuity and change

Q131. A timeline is pedagogically useful when learners use it to—

- A. memorise dates without context
- B. prove that dates explain every cause
- C. sequence events and discuss relationships, continuity and change
- D. avoid reading sources

Answer: C

Explanation: A timeline is a tool for reasoning about time, not merely a list of dates.

Q132. To teach chronology meaningfully, a teacher should ask learners to—

- A. copy dates in one column
- B. learn only the first and last year
- C. treat sequence as the whole explanation
- D. place events, connect them with evidence and explain what changed or continued

Answer: D

Explanation: Chronology becomes meaningful when linked to processes and evidence.

Q133. A local-history project may begin with—

- A. oral accounts, old photographs, buildings, records and questions about change in the locality
- B. a conclusion chosen before investigation
- C. only a national textbook paragraph
- D. unverified rumours treated as facts

Answer: A

Explanation: Local sources connect learners with history while requiring comparison and critical checking.

Q134. When using oral history, learners should understand that an interview—

- A. is automatically the complete truth
- B. provides a valuable personal perspective that should be contextualised and compared with other evidence
- C. has no relationship to memory
- D. must be rejected because it is not printed

Answer: B

Explanation: Oral testimony gives voice and experience but may be selective or shaped by memory.

Q135. An artefact-based history lesson is strongest when learners—

- A. guess its entire history from appearance
- B. handle fragile objects without rules
- C. observe its material and context, ask questions and infer cautiously
- D. memorise its colour only

Answer: C

Explanation: Artefacts are evidence whose meaning depends on context, comparison and careful observation.

Q136. Teaching multiple narratives about an event helps learners—

- A. believe that evidence does not matter
- B. treat every claim as equally proven
- C. avoid forming any reasoned conclusion
- D. compare perspectives and understand why historical interpretation may differ

Answer: D

Explanation: Multiple narratives require evidence-based comparison rather than simple relativism.

Q137. A continuity-and-change activity asks learners to—

- A. identify what remained and what transformed across a period using examples
- B. list only new inventions
- C. assume change is always progress
- D. ignore ordinary people's experiences

Answer: A

Explanation: Historical understanding includes both persistence and transformation.

Q138. To teach cause and consequence responsibly, a teacher should—

- A. reduce every event to one cause
- B. distinguish contributing factors, immediate triggers and longer-term effects
- C. treat consequences as always intended
- D. avoid asking why events happened

Answer: B

Explanation: Complex events usually involve multiple causes and consequences that may be unintended.

Q139. Presentism in History means—

- A. placing events on a timeline
- B. using present-day sources
- C. judging past people or situations only by present assumptions without considering historical context
- D. studying continuity into the present

Answer: C

Explanation: Historical empathy requires context without excusing injustice or abandoning critical judgement.

Q140. Which activity best connects history with evidence?

- A. recite the teacher's timeline only
- B. copy one date under every picture
- C. choose the most dramatic story without checking it
- D. Give groups different sources about a reform and ask them to build and defend a contextual timeline.

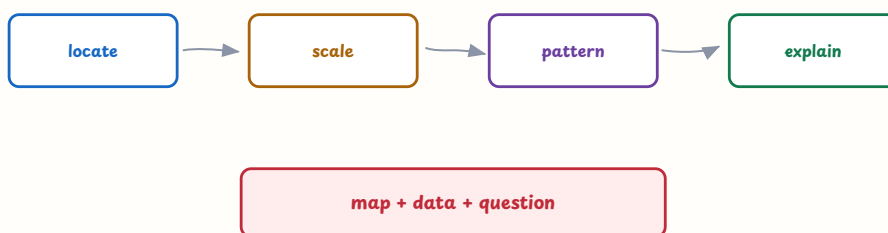

Answer: D

Explanation: The task joins chronology, source interpretation, argument and collaboration.

Set 15 — Geography Pedagogy, Maps and Spatial Thinking (Q141-Q150)

Geography pedagogy should move beyond colouring maps to location, scale, pattern, interaction and explanation.

map skill: locate, measure, interpret and communicate

a map is evidence, not just a picture to colour

चित्र 4 — map work becomes meaningful when learners locate, use scale, identify patterns and explain

Q141. The most appropriate first step in a map-based task is to—

- A. read the question, identify the map's purpose, legend, scale and orientation
- B. colour every region randomly
- C. ignore symbols and title
- D. memorise place names without location

Answer: A

Explanation: Map interpretation begins with understanding what the map represents and how its conventions work.

Q142. Why is map scale important?

- A. It identifies the map's political opinion
- B. It relates a measured distance on the map to the corresponding ground distance.
- C. It tells the age of a settlement
- D. It replaces the legend

Answer: B

Explanation: Scale allows spatial distances and comparisons to be interpreted.

Q143. A globe is especially helpful for teaching—

- A. every street in a village
- B. only election results
- C. Earth's curved shape, latitude, longitude and relative location
- D. a flat surface without distortion

Answer: C

Explanation: A globe models the three-dimensional Earth and supports basic spatial concepts.

Q144. A teacher asks learners to compare two maps of the same region from different years. This develops—

- A. only colouring skill
- B. memorisation of one fixed boundary
- C. the belief that maps never change
- D. understanding of spatial change and relationships over time

Answer: D

Explanation: Comparative maps can show settlement, land use, transport or boundary changes.

Q145. Field observation in Geography should include—

- A. a purpose, observation categories, location or time records and discussion of patterns
- B. only a picnic
- C. no notes because memory is enough
- D. a conclusion given before observation

Answer: A

Explanation: Structured fieldwork turns direct experience into geographic evidence.

Q146. A learner thinks a map is a picture that must be copied exactly. The teacher should—

- A. give a longer copying exercise
- B. use a real question and ask the learner to interpret symbols, scale and spatial relationships
- C. remove all maps
- D. mark the learner's drawing only for neatness

Answer: B

Explanation: Maps are representations for communicating and analysing spatial information, not pictures alone.

Q147. Which activity best develops environmental geographic thinking?

- A. memorise the word environment
- B. colour a forest without a question
- C. Map a local waste route, collect observations and discuss how location, people and systems interact.
- D. copy a definition with no local evidence

Answer: C

Explanation: The task connects spatial patterns, human activity, systems and evidence.

Q148. A map's legend is necessary because it—

- A. sets the weather for the region
- B. shows the author's marks only
- C. makes scale unnecessary
- D. explains the symbols, colours or lines used to represent features

Answer: D

Explanation: Readers need the key to decode the map's representation.

Q149. A simple school map can support inclusion when the teacher—

- A. uses tactile or enlarged versions, clear symbols and alternative ways to explain routes
- B. allows only fast visual copying
- C. keeps the map hidden from some learners
- D. assesses artistic decoration only

Answer: A

Explanation: Accessible representations allow more learners to participate in spatial reasoning.

Q150. The map-skills figure is best used to teach that a map is—

- A. a page to colour without interpretation
- B. a representation used with a question, scale, symbols and evidence to explain space
- C. a replacement for field observation
- D. always a complete and neutral picture

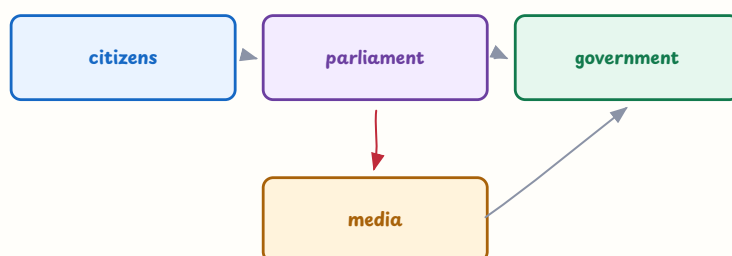

Answer: B

Explanation: Map literacy involves locating, measuring, identifying patterns and communicating explanations.

Set 16 — Civics Pedagogy and Democratic Participation (Q151-Q160)

Civics is learned through concepts and through respectful opportunities to practise democratic participation.

democracy: representation, debate and public information

information enables questioning and accountability

चित्र 5 — representation, debate, public information and accountability are connected

Q151. The best way to introduce local government is to—

- A. make learners memorise office names only
- B. teach government as distant from daily life
- C. connect its functions with a local service, institution, public problem and possible citizen participation
- D. avoid local examples

Answer: C

Explanation: Local cases make institutional roles and accountability concrete.

Q152. A mock Parliament is educationally useful when learners—

- A. perform without understanding the issue
- B. allow one speaker to decide everything
- C. memorise slogans only
- D. study an issue, use roles, follow procedure, debate reasons and reflect on representation

Answer: D

Explanation: Role play needs content, rules, evidence and reflection to develop civic understanding.

Q153. A classroom Constitution or set of norms should be—

- A. discussed, understood, applied fairly and revisited when experience suggests change
- B. written by the teacher secretly
- C. used only to punish
- D. unrelated to classroom behaviour

Answer: A

Explanation: Democratic norms gain meaning through participation, fairness and accountability.

Q154. A role play of a court case should help learners distinguish—

- A. a court from a popularity contest
- B. claims, evidence, legal reasoning, procedure and the possibility of a remedy
- C. judgement from evidence
- D. law from any personal preference

Answer: B

Explanation: Civic role play should clarify institutions and reasoning rather than imitate drama only.

Q155. Media literacy in Civics requires learners to ask—

- A. which headline is brightest
- B. whether every message is automatically true
- C. who produced the message, what evidence and purpose it has, and whose perspective is missing
- D. why sources do not matter

Answer: C

Explanation: Media analysis examines selection, ownership, purpose, evidence and representation.

Q156. A discussion on diversity should be organised so that learners—

- A. make one learner speak for an entire group
- B. turn differences into jokes
- C. avoid any evidence or reflection
- D. use respectful language, examine examples and question stereotypes without targeting classmates

Answer: D

Explanation: Inclusive civic discussion protects dignity and examines social ideas critically.

Q157. To teach gender as a social construct, a teacher can—

- A. compare how roles are represented in texts, media and daily practices and ask who benefits
- B. state that biology fixes every role
- C. avoid all examples of work and power
- D. assign roles by gender during activities

Answer: A

Explanation: Gender pedagogy examines social expectations, power and opportunities rather than naturalising stereotypes.

Q158. A lesson on rights should also discuss—

- A. rights as slogans with no institutions
- B. how rights are protected, what responsibilities and limits exist, and where remedies can be sought
- C. only duties without dignity
- D. a right as a reward for obedience

Answer: B

Explanation: Rights become meaningful through institutions, procedures, responsibilities and remedies.

Q159. A controversial civics issue is best assessed through—

- A. whether the learner repeats the official opinion
- B. volume of speech
- C. reasoned use of concepts and evidence, not agreement with the teacher's personal view
- D. a single word copied from the board

Answer: C

Explanation: Civic education should assess reasoning and understanding while allowing responsible disagreement.

Q160. The Parliament-media figure can support a lesson by asking learners to—

- A. memorise the labels only
- B. assume media is always neutral
- C. avoid discussing public decisions
- D. trace how citizens receive information, question representatives and hold institutions accountable

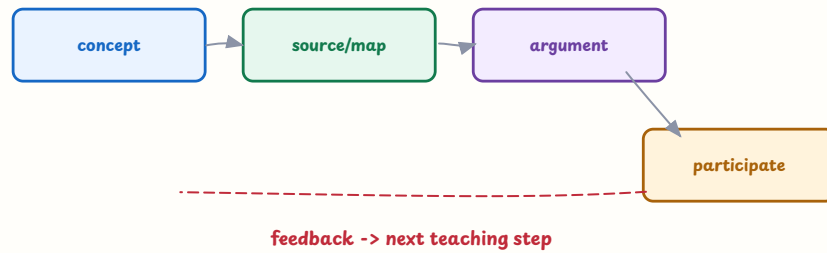

Answer: D

Explanation: The relationship among representation, information and accountability is central to democratic life.

Set 17 — Evaluation and Assessment in Social Science (Q161-Q170)

Assessment should capture concepts, source and map skills, reasoning, communication and participation.

SST assessment: knowledge, skills, reasoning and participation

चित्र 6 — Social Science assessment can combine concepts, source and map skills, argument and participation

Q161. Formative assessment in Social Science means—

- A. collecting evidence during learning and using feedback to adjust teaching or learner reasoning
- B. only giving a final rank
- C. testing without feedback
- D. recording attendance as achievement

Answer: A

Explanation: Formative assessment guides the next step while learning is still developing.

Q162. A diagnostic task in History may ask learners to—

- A. copy a date repeatedly
- B. interpret a short source and explain which clue led to their conclusion
- C. choose a rank from memory
- D. write a conclusion without a source

Answer: B

Explanation: The task reveals source-reading, inference and evidence needs.

Q163. A summative Social Science assessment generally—

- A. happens only before teaching
- B. is always informal conversation
- C. reports achievement after a unit, term or course of learning
- D. cannot include projects

Answer: C

Explanation: Summative assessment summarises learning; it may include written, oral, project or practical evidence.

Q164. A valid map-skills assessment should—

- A. score drawing decoration when scale is the goal
- B. use unrelated difficult vocabulary
- C. give marks only for memorised place names
- D. ask learners to use the intended scale, symbols, direction or spatial reasoning

Answer: D

Explanation: Validity requires evidence that matches the skill the teacher intends to assess.

Q165. A rubric for a source-based answer may include—

- A. claim, relevance of evidence, contextual understanding, reasoning and communication
- B. only handwriting neatness
- C. only agreement with the answer key
- D. the number of colours used

Answer: A

Explanation: A rubric makes the quality of evidence use and historical reasoning transparent.

Q166. A Social Science portfolio can show—

- A. only the highest mark
- B. source analyses, maps, timelines, project drafts, reflections and revised arguments
- C. only copied textbook pages
- D. only a list of absences

Answer: B

Explanation: A portfolio documents growth across different subject practices.

Q167. An observation checklist during a group enquiry should record—

- A. a permanent label such as weak
- B. family income
- C. specific behaviours such as using evidence, listening, locating, questioning and revising
- D. only who speaks loudest

Answer: C

Explanation: Specific observable criteria provide fair evidence for feedback.

Q168. An authentic Social Science assessment task is—

- A. copy ten definitions
- B. memorise one speech without context
- C. colour an unlabelled map
- D. use local data or sources to explain a public issue and propose a justified response

Answer: D

Explanation: Authentic tasks resemble how citizens use evidence to understand and respond to issues.

Q169. Reliability in evaluating a source-based answer improves when—

- A. criteria are clear, examples are discussed and scoring is applied consistently
- B. criteria remain hidden
- C. every answer must use identical wording
- D. marks depend on the teacher's mood

Answer: A

Explanation: Clear criteria and consistent application improve scoring reliability without eliminating valid variation.

Q170. The assessment figure suggests that Social Science evaluation should—

- A. use one recall test only
- B. combine conceptual knowledge, source or map skills, reasoning and participation evidence
- C. ignore practical and discussion work
- D. grade only political opinions

Answer: B

Explanation: The subject has multiple learning dimensions that need appropriate evidence.

Set 18 — Problems of Teaching, Inclusion and Remedial Support (Q171-Q180)

Inclusive pedagogy removes barriers while preserving meaningful Social Science concepts, evidence and participation.

Q171. A common problem with teaching Social Science only through rote learning is that learners may—

- A. automatically develop critical thinking
- B. understand every perspective deeply
- C. remember isolated facts but struggle to interpret evidence or apply concepts
- D. become skilled in fieldwork without practice

Answer: C

Explanation: Recall is useful but insufficient for source analysis, reasoning, maps and civic application.

Q172. A learner struggles to read a dense History source. The teacher should—

- A. remove all source work
- B. declare the learner unable to study History
- C. give only dates to memorise
- D. chunk the source, pre-teach essential vocabulary, use guiding questions and preserve the evidence task

Answer: D

Explanation: Language scaffolding improves access without removing historical reasoning.

Q173. For a learner with visual impairment in Geography, suitable support includes—

- A. tactile or enlarged maps, verbal spatial descriptions and an accessible response mode
- B. exemption from all map learning
- C. only tiny printed maps
- D. assessment of colouring skill

Answer: A

Explanation: Accessible spatial representations allow participation in geographic concepts and skills.

Q174. An advanced Social Science learner should receive—

- A. only extra copying
- B. an open enquiry requiring comparison of sources, argument, evidence and independent questions
- C. permanent exemption from group discussion
- D. a fixed role as assistant teacher

Answer: B

Explanation: Enrichment deepens analysis and independence rather than adding repetitive volume.

Q175. A low-resource classroom can teach source analysis by using—

- A. no sources until a laboratory is available
- B. only expensive replicas
- C. local objects, oral accounts, newspaper extracts, public records and carefully framed questions
- D. unverified social-media posts as fact

Answer: C

Explanation: Inquiry depends on thoughtful use and contextualisation of evidence, not expensive equipment alone.

Q176. A learner says all members of a community share one culture. The teacher should—

- A. confirm the stereotype
- B. shame the learner without discussion
- C. avoid studying communities
- D. use varied examples and ask how identity, region, class, gender and experience create diversity within groups

Answer: D

Explanation: Social groups are internally diverse; evidence and nuance challenge overgeneralisation.

Q177. Remedial teaching after a learner confuses latitude and longitude should begin with—

- A. diagnosing the learner's spatial idea and using a globe or labelled model to compare the two
- B. more definitions copied from the board
- C. a harder map without support
- D. a permanent low-level label

Answer: A

Explanation: Diagnosis and a suitable spatial representation target the actual misconception.

Q178. To reduce anxiety in a civics discussion, the teacher can—

- A. force immediate public speaking
- B. allow preparation, small-group rehearsal, respectful norms and more than one response mode
- C. grade only the loudest voice
- D. ban questions

Answer: B

Explanation: Gradual, safe participation supports civic communication and confidence.

Q179. An inclusive Social Science example should—

- A. show only the dominant group
- B. use marginalised groups only as problems
- C. represent varied communities and roles without stereotyping or treating one experience as universal
- D. avoid any social diversity

Answer: C

Explanation: Representation affects belonging, interpretation and expectations.

Q180. A remedial plan is successful when the teacher—

- A. repeats the same worksheet forever
- B. labels the learner after one attempt
- C. stops teaching after giving notes
- D. reassesses the targeted skill and adjusts support using new evidence

Answer: D

Explanation: Remediation is cyclical: diagnose, support, observe, reassess and adjust.

Set 19 — Projects, Community Resources and Interdisciplinary Work (Q181-Q190)

Projects should have a question, evidence, roles, ethical procedures, communication and reflection.

Q181. The first step in a Social Science project should be to—

- A. frame a clear, investigable question and decide what evidence is needed
- B. choose a decorative cover
- C. collect random facts
- D. write the conclusion first

Answer: A

Explanation: A question gives the project direction and helps determine sources or data.

Q182. A project using oral interviews should include—

- A. secret recording in every case
- B. informed consent or respectful permission, prepared questions, accurate records and contextual comparison
- C. editing answers to fit a conclusion
- D. treating memory as infallible

Answer: B

Explanation: Ethical and careful interviewing protects participants and improves interpretation.

Q183. A field study of a local market can integrate Geography and Civics by examining —

- A. only the colour of shop signs
- B. only a list of prices
- C. location, transport, livelihoods, regulation, access and the experiences of different users
- D. a market as unrelated to public life

Answer: C

Explanation: Markets are human-environment and civic spaces with spatial and institutional relationships.

Q184. A community data project should teach learners to—

- A. choose data to prove a preferred claim
- B. hide inconvenient responses
- C. draw a graph without labels
- D. define variables, collect information fairly, represent it and discuss limitations

Answer: D

Explanation: Data literacy requires transparent collection, representation, interpretation and limits.

Q185. In cooperative project work, individual accountability means—

- A. each learner has a visible responsibility and can explain their contribution
- B. one learner completes everything
- C. the group receives marks without evidence
- D. roles are fixed by social status

Answer: A

Explanation: Accountability prevents unequal participation and supports genuine collaboration.

Q186. When learners use websites for a Social Science project, they should—

- A. copy the first result without checking
- B. record sources, compare reliability and distinguish quotation from their own explanation
- C. remove all source names
- D. assume online information is always accurate

Answer: B

Explanation: Source literacy and attribution are part of responsible enquiry.

Q187. A project is interdisciplinary when it—

- A. places unrelated worksheets together
- B. removes subject-specific reasoning
- C. uses concepts and methods from more than one field to answer a connected question
- D. uses decoration from another subject only

Answer: C

Explanation: Interdisciplinary work retains disciplinary tools while connecting them around a meaningful problem.

Q188. A local government project should communicate findings to—

- A. only the teacher privately
- B. no audience because projects need no communication
- C. an audience without explaining the evidence
- D. an appropriate audience such as classmates, residents or a local institution in a clear evidence-based form

Answer: D

Explanation: Public communication gives enquiry a civic purpose and requires clarity and accountability.

Q189. Reflection after a project should ask learners—

- A. what evidence they gathered, what changed in their thinking, what limitations remained and what they would do next
- B. only whether the cover looked attractive
- C. to repeat the conclusion without review
- D. to hide unsuccessful parts

Answer: A

Explanation: Reflection develops metacognition, honesty about evidence and improved enquiry.

Q190. Community resources are pedagogically valuable when the teacher—

- A. treats local claims as automatically true
- B. connects local knowledge with concepts, checks evidence and respects the people involved
- C. uses people only as decoration
- D. avoids connecting the experience with curriculum

Answer: B

Explanation: Community resources become learning resources through respectful, critical and curriculum-linked use.

Set 20 — Classroom Scenarios and Integrated Revision (Q191–Q200)

These scenarios combine History, Geography, Civics pedagogy, evidence, inclusion and assessment.

Q191. A textbook presents a historical event through one ruler's account only. The teacher should—

- A. declare the textbook complete
- B. discard all written sources
- C. add other sources and ask whose perspective is present, missing or shaped by purpose
- D. ask learners to memorise the ruler's view

Answer: C

Explanation: Multiple sources and source-position questions make historical interpretation more critical.

Q192. A learner says maps are useful only for memorising capitals. The best response is to—

- A. give a longer list of capitals
- B. agree that maps have no analytical role
- C. remove maps from Geography
- D. use a map to investigate a real question involving location, scale, pattern or movement

Answer: D

Explanation: Map use becomes meaningful when it supports spatial enquiry and explanation.

Q193. A learner explains the Revolt of 1857 with one cause only. The teacher should—

- A. use a cause web and varied sources to distinguish long-term conditions, triggers and regional experiences
- B. accept the single cause as complete
- C. ask for more dates without explanation
- D. avoid discussing the revolt's complexity

Answer: A

Explanation: Historical causation is multi-layered and differs across groups and regions.

Q194. Learners collect village water-use data but one group was not included. The teacher should—

- A. hide the gap in the report
- B. discuss sampling and representation, collect additional evidence where possible and state the limitation
- C. claim the data represent everyone
- D. discard all data without reflection

Answer: B

Explanation: Data interpretation requires attention to who is represented and who may be missing.

Q195. A media report uses a dramatic headline but provides no source. Learners should—

- A. accept it because it is popular
- B. copy the headline as a fact
- C. separate claim from evidence, seek corroboration and examine the purpose and framing
- D. reject all media permanently

Answer: C

Explanation: Media literacy involves checking source, evidence, purpose and presentation.

Q196. In a civics discussion one learner dominates and others remain silent. The teacher should—

- A. let the dominant learner continue
- B. grade silence as agreement
- C. end all discussion permanently
- D. use turn-taking structures, roles and small-group rehearsal so all can contribute

Answer: D

Explanation: Structured participation makes democratic classroom discourse more equitable.

Q197. Two historical sources contradict each other. The most appropriate teacher response is to—

- A. compare authorship, date, purpose and evidence before asking learners to build a qualified interpretation
- B. declare one source wrong without analysis
- C. average the two claims
- D. avoid the contradiction

Answer: A

Explanation: Contradiction is an opportunity for source criticism and contextual reasoning.

Q198. A learner understands a civic concept orally but struggles with a long written answer. The teacher should—

- A. assume the learner has no understanding
- B. allow an oral or organised response when appropriate and scaffold the written form without lowering the concept
- C. remove all civics assessment
- D. mark only handwriting

Answer: B

Explanation: Response mode should not create an irrelevant barrier to the intended civic understanding.

Q199. A teacher wants to assess whether learners can use evidence, not just recall. The best task is—

- A. ask for a list of ten dates
- B. test only textbook wording
- C. give a source or map and ask learners to make and justify a claim
- D. ask learners to copy a definition

Answer: C

Explanation: Source- or map-based justification directly samples evidence use and reasoning.

Q200. Which teacher best reflects CTET Social Science pedagogy?

- A. A teacher who values only dates, names and textbook copying
- B. A teacher who avoids controversial questions and local contexts
- C. A teacher who grades agreement with personal opinions
- D. A teacher who connects History, Geography and Civics with evidence, enquiry, maps, multiple perspectives, democratic discussion, inclusion and meaningful assessment.

Answer: D

Explanation: Strong Social Science pedagogy integrates concepts, evidence, enquiry, critical thinking, citizenship, inclusion and assessment.

Part 2 Quick Answer Index

101 A	102 B	103 C	104 D	105 A	106 B	107 C	108 D	109 A	110 B
111 C	112 D	113 A	114 B	115 C	116 D	117 A	118 B	119 C	120 D
121 A	122 B	123 C	124 D	125 A	126 B	127 C	128 D	129 A	130 B
131 C	132 D	133 A	134 B	135 C	136 D	137 A	138 B	139 C	140 D
141 A	142 B	143 C	144 D	145 A	146 B	147 C	148 D	149 A	150 B
151 C	152 D	153 A	154 B	155 C	156 D	157 A	158 B	159 C	160 D
161 A	162 B	163 C	164 D	165 A	166 B	167 C	168 D	169 A	170 B
171 C	172 D	173 A	174 B	175 C	176 D	177 A	178 B	179 C	180 D
181 A	182 B	183 C	184 D	185 A	186 B	187 C	188 D	189 A	190 B
191 C	192 D	193 A	194 B	195 C	196 D	197 A	198 B	199 C	200 D

Revision target: In pedagogy questions, identify the evidence, perspective or learning barrier first. Then choose the response that preserves the subject concept, enables participation and turns enquiry or assessment into better teaching.
